# Norbreck Superb Blue

is the solution to your fertility problems

Norbreck Genetics have formulated three highly fertile easy calving Belgian Blue bulls in one straw to help the modern dairy farmer overcome the fertility issues that appear to exist on most modern dairy units.

Each bull has a different rate of capacitation, which means once your dairy cow has released an egg from her ovaries these SUPERB BLUE bulls should be active in the reproductive tract for a longer period.

You also have the assurance of easy calving combined with good calf quality. Norbreck Genetics is renowned for its Belgian Blue bulls and now has global sales from many different bulls with farmer satisfaction the backbone of the business.

**WARNING : THESE STRAWS MAY CONTAIN SERIOUSLY ACTIVE AND HIGHLY FERTILE SPERM. Your conception rates could improve dramatically.**

SEMEX is pleased to team up with Norbreck Genetics to provide this special Belgian Blue mix.
